The Obsidian AI Second-Brain Vault

A ready-to-import system that organises itself with AI

The Obsidian AI Second-Brain Vault

A complete, ready-to-import Obsidian system that captures everything, organises itself with AI, and turns scattered notes into projects, content, and decisions. Built for solopreneurs, freelancers, students, and anyone drowning in their own ideas.

This document IS the vault: copy the folder structure and paste each template into a note of the same name. Setup takes under 10 minutes. Works with the free Obsidian app + any AI (ChatGPT/Claude/Gemini).

The philosophy in one line

Capture without friction → let AI synthesise → act on what matters → archive the rest.

Most note apps become graveyards because capturing is easy but *retrieving and acting* is hard. This vault fixes the second half with AI prompts that do the organising for you.

Vault structure (create these folders)

```
📁 Second-Brain/
├── 00_INBOX/           # Capture everything here, unsorted. Zero friction.
├── 01_PROJECTS/        # Active work with an outcome and a deadline.
├── 02_AREAS/           # Ongoing responsibilities (health, finances, clients).
├── 03_RESOURCES/       # Reference material, saved articles, prompt library.
├── 04_ARCHIVE/         # Done, dead, or dormant. Out of sight, still searchable.
└── 05_TEMPLATES/       # The reusable templates below.
```

(This is the PARA method — Projects, Areas, Resources, Archive — with an Inbox front door. It's the most proven personal-knowledge structure that exists.)

Daily driver: the Daily Note

Create a note titled with today's date (YYYY-MM-DD). Paste this template:

```
# {{date}}

## 🎯 Top 3 priorities
- [ ]
- [ ]
- [ ]

## 📝 Quick capture
(Dump anything here – ideas, tasks, links. Sort it later, or let AI sort it.)

## 📅 Notes & log

## ✅ Wins today

## 🔄 Carry over to tomorrow
```

Template 1 — Project Note (05_TEMPLATES/Project.md)

```
# Project: {{title}}

**Outcome:** (What does "done" look like?)
**Deadline:**
**Status:** 🟡 Active
**Related:** [[ ]]

## 🎯 Goal

## ✅ Next actions
- [ ]

## 🧠 Notes & decisions

## 🔗 Resources

## 📦 Deliverables
```

Template 2 — Meeting / Client Note (05_TEMPLATES/Meeting.md)

```
# Meeting: {{title}} – {{date}}

**With:**
**Project:** [ ]

## Raw notes
(Type or paste messy notes here during the call.)

## AI summary
(Run the "Meeting Summariser" prompt on the raw notes and paste the result.)

## Decisions
-

## Action items
- [ ] (owner) – (deadline)
```

Template 3 — Content Idea (05_TEMPLATES/Content.md)

```
# Content: {{title}}

**Format:** (thread / post / video / newsletter)
**Hook:**
**Core point:**
**Status:** 💡 Idea

## Draft

## Repurpose into
- [ ]
```

Template 4 — Weekly Review (05_TEMPLATES/Weekly-Review.md)

```
# Weekly Review – Week of {{date}}

## Wins

## Misses / lessons

## Numbers (revenue, leads, output)

## Top 3 priorities next week
- [ ]
- [ ]
- [ ]

## Projects to move / park / kill
```

The AI prompt library (the "second brain" part)

Save these in `03_RESOURCES/Prompt-Library.md` . Run them on your notes to make the vault work for you.

1 — Weekly Inbox Synthesiser

Task: Here are all my quick-capture notes from the past 7 days [PASTE 00_INBOX content]. Group related ideas together, identify action items (mark with a checkbox), flag anything time-sensitive, and give me a 3-bullet summary of the themes. Tell me which items belong in a Project vs Resource vs Archive.

2 — Meeting Summariser

Role: Executive assistant.
Task: Turn these raw meeting notes [PASTE] into:

- 3 key decisions made
- Action items with owner and deadline
- Anything needing follow-up or client approval

Concise and scannable.

3 — Note-to-Content Converter

Task: Take this rough note/idea [PASTE] and turn it into: an X thread, a LinkedIn post, and a short newsletter section. Keep my voice, sharpen the hook, adapt each to its format.

4 — Project Kick-Starter

Task: I want to start this project: [DESCRIBE]. Give me a clear outcome statement, break it into 5–8 concrete next actions in order, flag the riskiest unknown to tackle first, and list what resources I'll need.

5 — Knowledge Connector

Task: Here are notes on two topics [PASTE A] and [PASTE B]. Find the non-obvious connections between them and suggest one new idea, project, or piece of content that sits at their intersection.

6 — Decision Log

Task: I need to decide: [DECISION]. Options: [LIST]. Walk me through the criteria that matter, score each option, note risks and reversibility, and recommend one. Format it so I can paste it into my project note as a permanent decision record.

7 — End-of-Week Reviewer

Task: Based on these notes from my week [PASTE], run my weekly review: what went well, what slipped, what I learned, and my top 3 priorities for next week. Be honest but constructive.

How to actually use it (the 5 habits that make it stick)

1. **One inbox.** Every idea, link, and task goes into `00_INBOX` the moment it appears. No deciding where it goes yet — that's the friction that kills systems.
 2. **Daily note is home base.** Open it each morning, set your top 3, capture as you go.
 3. **Weekly synthesis.** Once a week, run the Inbox Synthesiser prompt. Let AI sort the week's chaos into projects and actions. This is the magic moment.
 4. **Link liberally.** Use `[[double brackets]]` to connect notes. Obsidian's graph turns your vault into a genuine web of thought.
 5. **Archive ruthlessly.** Done or dead? Move it to `04_ARCHIVE`. A clean workspace is a clear mind — and it's all still searchable.
-

Why Obsidian (and why free)

- **Local-first & free** — your notes are plain Markdown files on your own machine. No subscription, no lock-in, yours forever.
- **Infinitely extensible** — thousands of free community plugins (calendar, kanban, AI integrations).
- **Future-proof** — plain text outlives every app. This vault will still work in 20 years.

Install Obsidian (free) → create the folders above → paste the templates → start capturing today.
